INTIMATE TIGHTENING

A revolutionary New Laser Treatment tightens the vaginal walls which enhances sexual pleasure, restores tone to tissue, and reduces the symptoms of stress urinary incontinence. It increases blood flow , which in turn increases lubrication and strengthens the supporting ligaments surrounding the bladder and urethra. to reduce the symptoms of stress urinary incontinence.

Why choose this procedure:

- A minimally invasive and short treatment
No suggested recovery period
- Enhanced muscle tone, strength and elasticity of vaginal tissues
- Stronger sensation during intercourse
- Better control over urinary incontinence

THERMiVa

THERMiVA Women, take back control of your body by reclaiming your pre-baby body & restoring and reviving your well-being. ThermiVa applications use radiofrequency energy to gently heat tissue. The ThermiVa electrode is designed for applications including the vaginal anatomy and is specifically useful to help you regain vulvovaginal youthfulness.

ThermiVa is essentially a non-surgical vaginal tightening treatment for women and it allows them to overcome the effects of child-birth or aging. This treatment uses radiofrequency energy which is sent over the affected area, both internally and externally. This radiofrequency heats the tissue and stimulates the formation of collagen. It is generally performed in three treatments and over the course of three months.

HOW IS THE TREATMENT DONE?

In ThermiVa, therapeutic radio frequency is used to gently contract and tighten the labia and the vaginal canal. It helps the tissues and nerves to heal by stimulating the production of collagen. In this process, an S-shaped hand piece with a thermistor tip is used to warm the vaginal canal and external labia. Temperature of the tissues is monitored with the help of a probe and optimal treatment temperature is ensured so as to make the treatment effective. The treatment has often been compared to a gentle, warm massage.

The time required for this treatment is roughly about 30 minutes. Thus, it is one of the easiest methods by which a woman can overcome the child-bearing and aging effects on her body

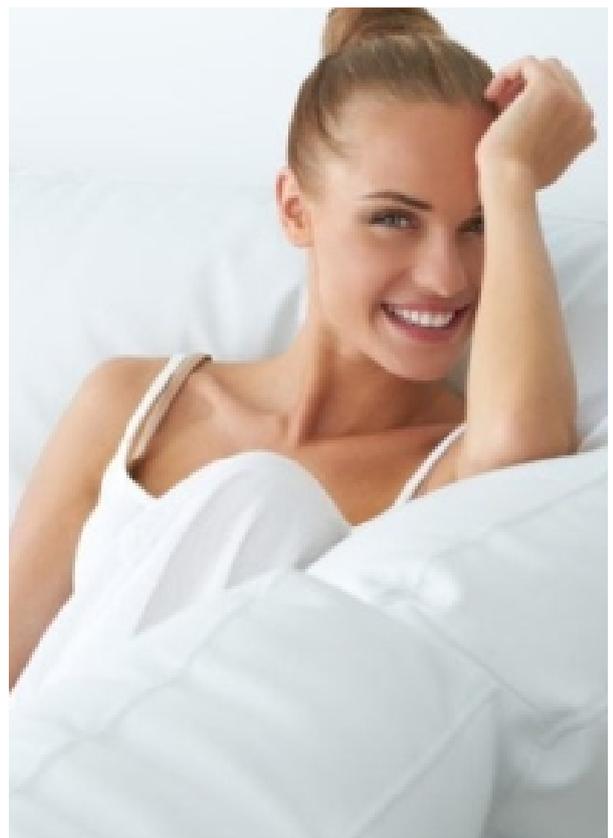

THERMlva

WHY CHOOSE THIS PROCEDURE:

A woman will be eligible for this treatment if she has vaginal laxity; if she is not satisfied with appearance of their labia; if she is having orgasmic problems or even if she is suffering from sexual dissatisfaction. This treatment is also ideal for those women who are suffering from vaginal dryness or pelvic prolapse such as fallen bladder or rectum and for women with urinary incontinence.

- **NON-INVASIVE TREATMENT WITH LITTLE TO NO DOWNTIME**
- **MINIMAL DISCOMFORT AND NO PAIN**

INTIMATE LIGHTENING

Mostly peoples are trying bleaching creams to keep up their appearance. These Bleaching creams for private areas are inexpensive but not a safe and effective way to get rid of skin discoloration that can occur around your most intimate areas, such as the vagina, penis, anus, and nipples. To Restores the original color of the Intimate areas we offer Bespoke lightening Treatments that are effective, Safe with scientifically proven results. The Results of all Treatments are mostly consistent without any Side effects and guaranteed results.

O SHOT

A radical new treatment for women promises a cure for the bedroom blues. Call it the shot heard round the world—only this time the revolution is on behalf of modern women. The O-Shot, a new, noninvasive treatment that aims to alleviate female sexual dysfunction by extracting PRP, or platelet-rich plasma, from a woman's own blood and injecting it directly into the vaginal area. The O-Shot uses PRP to stimulate the growth of new cells in a woman's vaginal walls and clitoris. The platelets, which the body utilizes to naturally generate tissue, increase not only the number of cells but also, Runels claims, sensitivity to stimulation.

HOW DOES IT WORKS

So how does the O-Shot work? First, the patient's blood is drawn (about half a tablespoon) and placed in a centrifuge to separate out the PRP. To determine where an injection will have maximum results, Would does "vaginal mapping," asking the patient where she's most sensitive, and then an anesthetic cream is applied to the area. "You have to understand each woman's sexuality and her anatomy to know where to put it. The real payoff, though, comes over the next few months as the PRP "stimulates the stem cells, collagen, and blood vessels," says Runels, who calls it "fertilizer to grow the tissue."

CONNECT TODAY!

Confused which treatment will be best for you? There is no need to worry about you anything. Get in touch with Signature Aesthetics Clinic to get the guidance from the trained and experienced professionals with years of experience.

We will guide you in the right direction and our valuable customer will get optimal results. We have state-of-the-art facilities, trained professionals, and advanced devices for the treatment.
